

HazelToken

How to Buy

A comprehensive guide to get Hazel Token

General information

What is Hazel Token (HZL)?

Hazel is a community-governed token with small transaction fees that are donated towards planting trees around the world.

What are HZL's tokenomics?

Hazel has a maximum supply of **900 million** tokens with **600 million** locked in the Liquidity Pool. The remaining third (**300 million**) is kept in the deployer address and is automatically burned with every transaction that is made. You can read more about the logic behind this on our website <https://hazeltoken.com/>

What are HZL's built-in limits?

The current wallet size limit is set at 9 million HZL and is subject to change via community voting. Remember to buy a maximum of 9 million HZL per wallet.

5. [Swapping BNB for HZL](#)

Get started

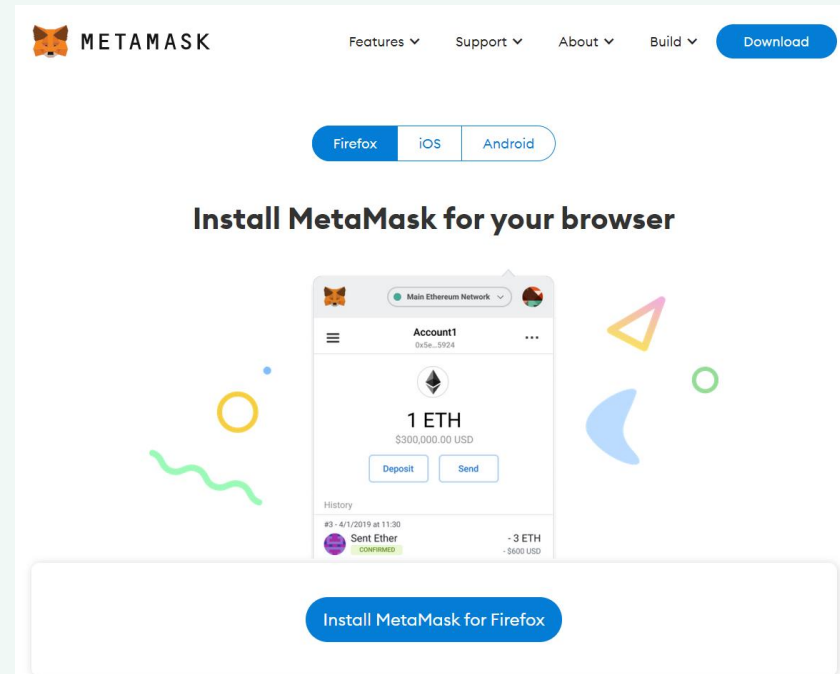

To be able to get Hazel Token you'll need 4 things:

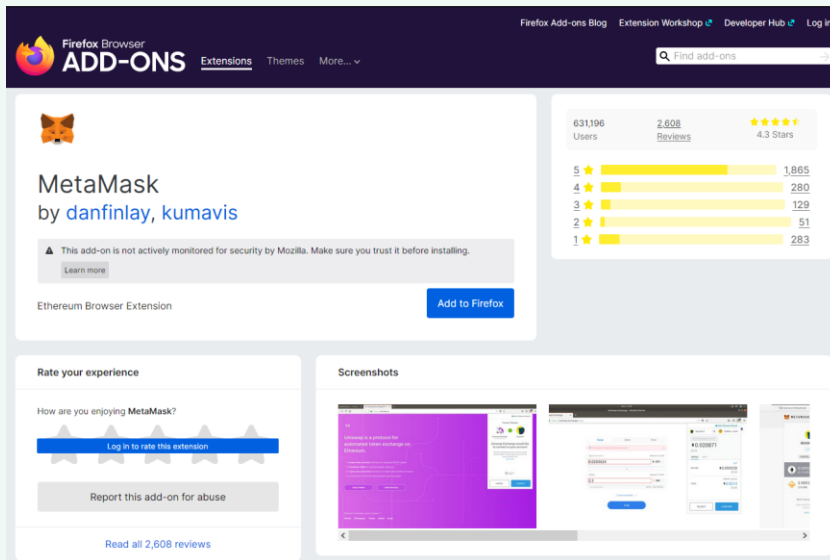

- a wallet;
- access to the Binance Smart Chain Network;
- an account on a trading platform that allows you to buy BNB (like Binance, Crypto.com, Kucoin, etc. see the [full list here](#)); and
- the Hazel Token smart contract address.

Getting a wallet

First step is to download a wallet. This guide will show you how to download and setup MetaMask.

Head on [here](#) and click Install MetaMask for Firefox (or Chrome or any other browser you might be using).

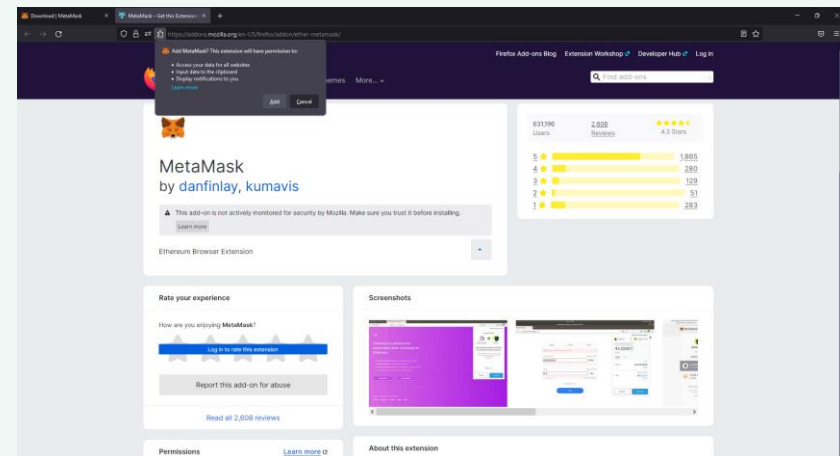

After clicking the install button, the following page will open. All you need to do is click Add to Firefox. The process is similar for Google Chrome.

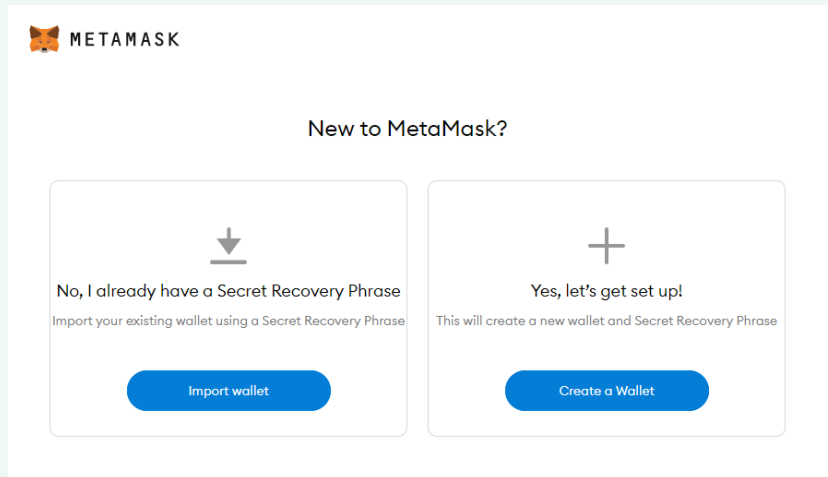

A dialog box should appear asking permission to add MetaMask to your browser extensions. Just click Add.

That's it for the installation. A small logo should appear in the top right corner of your windows. That's the MetaMask wallet extension.

Click on it and it will take you to the wallet setup wizard.

Setup the wallet

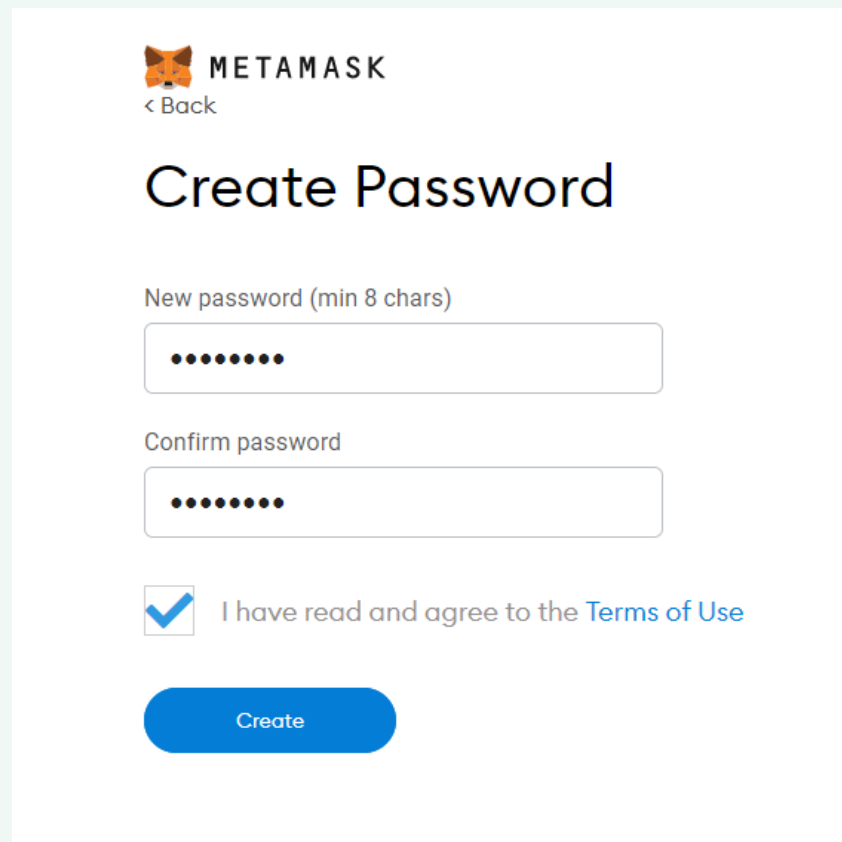

Click Get Started on the Welcome page and then click on Create a Wallet.

The page that comes up is a prompt to help the developers of MetaMask improve their app by sending anonymous usage data. You can choose to agree or disagree. We'll let you decide. Just click one of the buttons to move to the next page.

This is where you choose your password to unlock your wallet.

THIS IS DIFFERENT FROM THE WALLET'S PRIVATE KEY OR MNEMONIC SEED PHRASE.

After choosing a password click the checkbox (we recommend reading the Terms of Use before doing so) and click on Create.

Secure your wallet

Before getting started, watch this short video to learn about your Secret Recovery Phrase and how to keep your wallet safe.

Next

The next page features a very informative video about how to secure your wallet and your Secret Recovery Phrase (the Mnemonic Seed Phrase).

We recommend watching the video as it provides much needed information especially for beginners.

After you're finished, click Next.

This step is important in securing your wallet. It's best to follow the instructions provided by the MetaMask team along with the Tips provided.

Write it down because you're going to need the Secret Recovery Phrase for the next step.

After doing so, click on Next.

 METAMASK
< Back

Secret Recovery Phrase

Your Secret Recovery Phrase makes it easy to back up and restore your account.

WARNING: Never disclose your Secret Recovery Phrase. Anyone with this phrase can take your Ether forever.

CLICK HERE TO REVEAL SECRET WORDS

[Remind me later](#) [Next](#)

Tips:

Store this phrase in a password manager like 1Password.

Write this phrase on a piece of paper and store in a secure location. If you want even more security, write it down on multiple pieces of paper and store each in 2 - 3 different locations.

Memorize this phrase.

[Download this Secret Recovery Phrase and keep it stored safely on an external encrypted hard drive or storage medium.](#)

Confirm your Secret Recovery Phrase

Please select each phrase in order to make sure it is correct.

blue	blue	blue	blue
blue	blue	blue	blue
blue	blue	blue	blue

Confirm

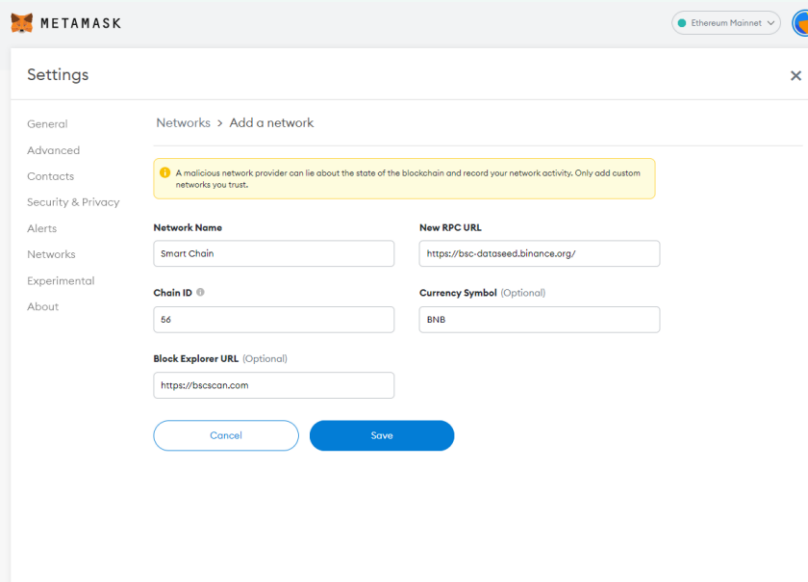

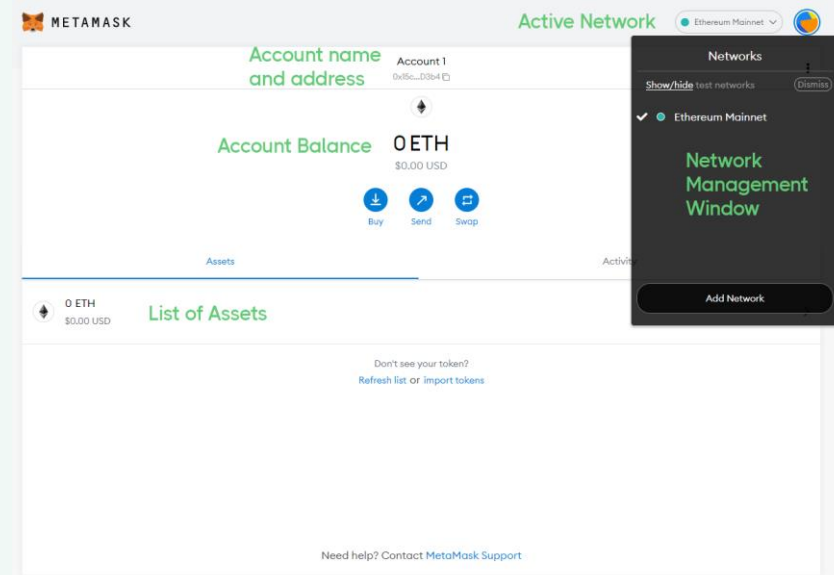

At this step, all you need to do is click the words below in the same order as the Secret Recovery Phrase you wrote down. Don't worry if you make a mistake. You can rearrange the words by dragging and dropping them in the right position. Just make sure they are the same as the Secret Recovery Phrase and click Confirm.

MetaMask will now give you some more tips on safety. Read them and click All Done.

MetaMask will ask for your password (the one you chose earlier, not the Secret Recovery Phrase) to unlock the wallet.

This is your wallet's main interface. In order to be able to interact with the Hazel Token Smart Contract, we need to add and switch to the Binance Smart Chain Network. Don't worry, it's very easy to do so.

You can follow the official Binance guide [here](#) or continue with this tutorial. Whatever your choice is, click on Add Network.

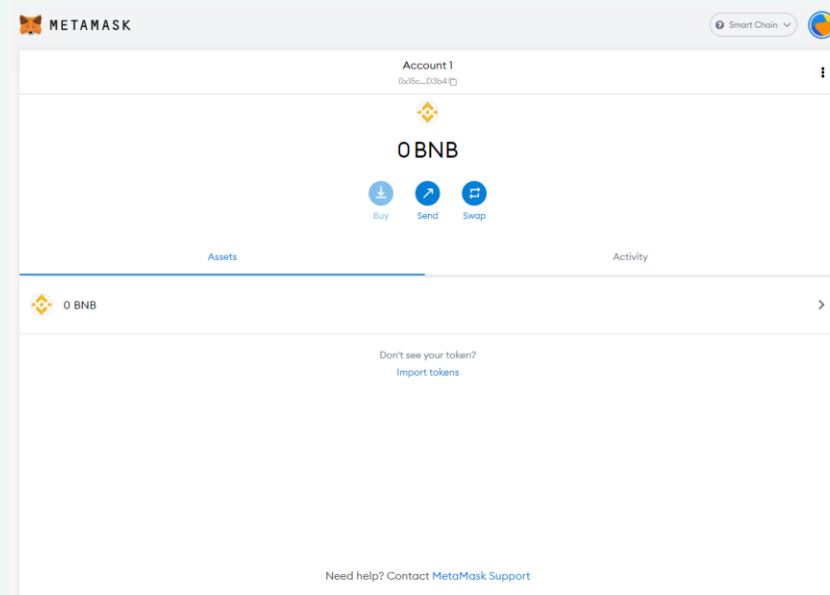

All you need to do now is to input the correct information into the forms and click save.

Network Name: Smart Chain
New RPC URL: <https://bsc-dataseed.binance.org/>
ChainID: 56
Symbol: BNB
Block Explorer URL: <https://bscscan.com>

You're all set now. As you can see, the Active Network has change to Smart Chain and the Assets List and Account Balance now feature BNB.

Don't worry. You can always switch back to the Ethereum Mainnet. No Assets on either network will be lost during the switch.

Tip: Click on Account 1 to copy your wallet address to clipboard. You will be needing that later to send BNB from a crypto trading platform to your MetaMask Wallet. [Here is a list](#) of every platform that trades BNB.

Obtaining BNB

To obtain BNB you need an account on one of the platforms from the list above.

There are multiple ways to buy BNB. You can do it directly with a credit card, by exchanging coins/tokens or with fiat.

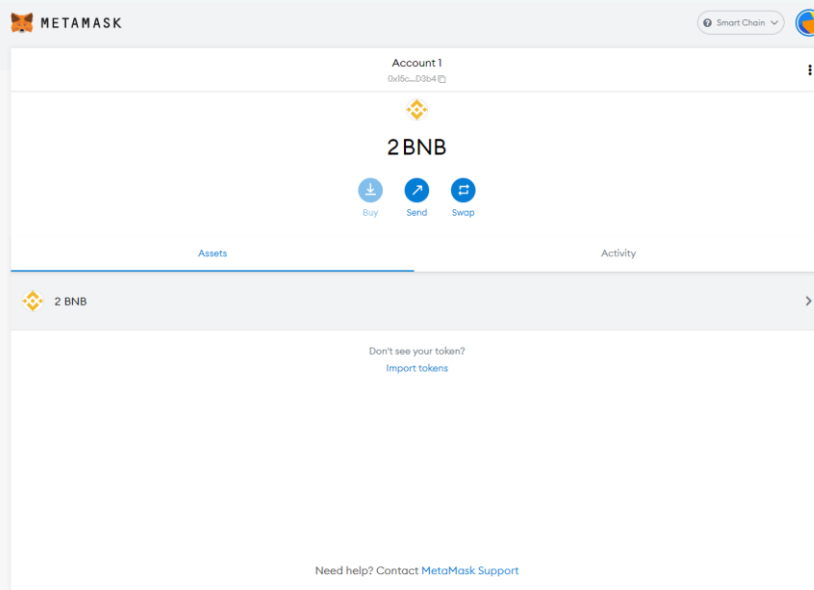

Every exchange has its unique user experience so it's best to follow their official guides. Here are some of them but you can always Google or YouTube search "how to buy crypto on <platform/exchange name>" or "how to buy BNB". The internet is your best friend here.

Binance: <https://www.binance.com/en/buy-bnb>

Kucoin: <https://coincodex.com/article/11210/how-to-buy-binance-coin-bnb-on-kucoin/>

FTX: <https://coincodex.com/article/9429/how-to-buy-binance-coin-on-FTX/>

After you've purchased BNB, you need to withdraw it to your MetaMask wallet. Again, different exchange platforms have different procedures so it's best to do a quick search for "how to withdraw BNB from <platform/exchange name>". It should be easy enough. Just make sure to use the right wallet address for the withdrawal.

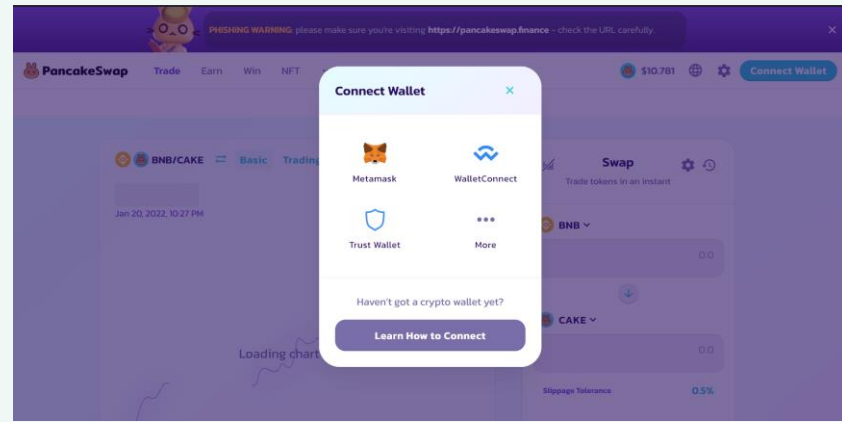

Copy your wallet address by clicking Account 1 and paste it on the exchange's withdrawal page. Select the amount to withdraw and follow the instructions provided by the platform.

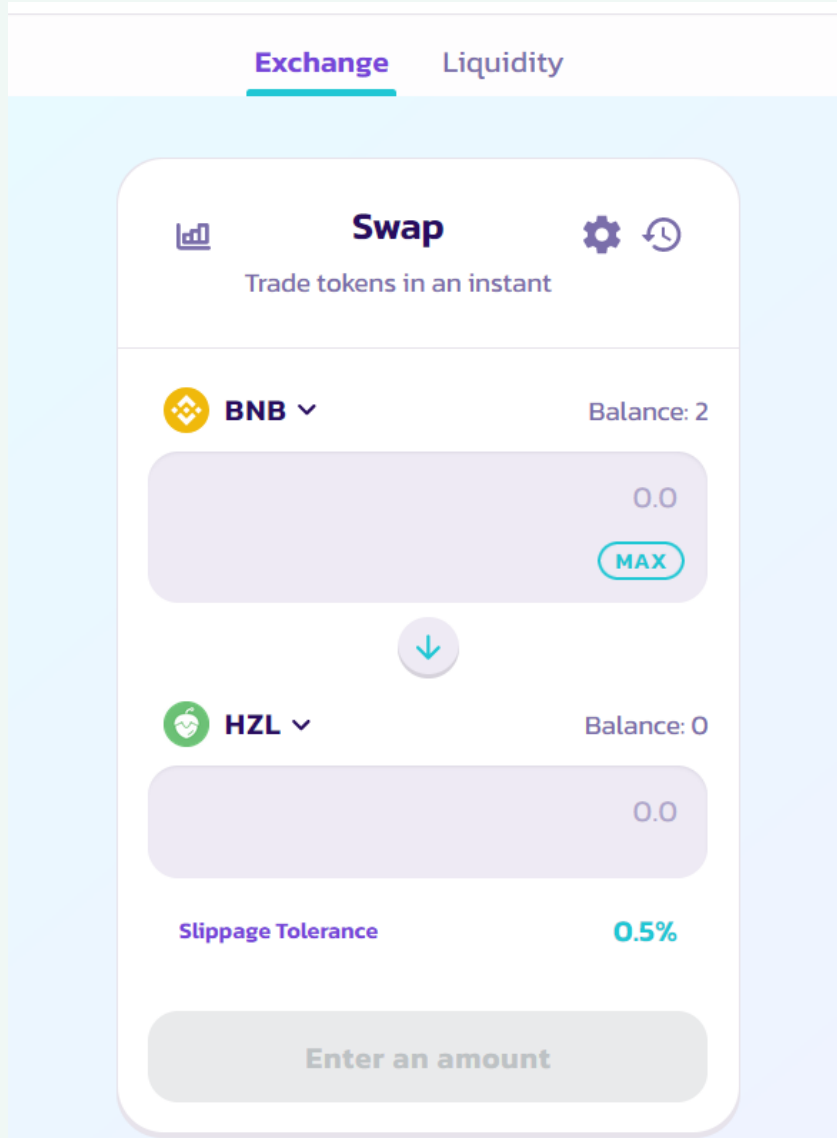

It should take a few minutes but you'll usually get a confirmation notification from the exchange platform when the withdrawal is complete. After that, your BNB should appear in the MetaMask wallet.

Swapping BNB for HZL

Once you finished setting up everything, you're ready to swap BNB for Hazel Token (HZL). The swap will be done on [PancakeSwap](https://pancakeswap.finance), a decentralized crypto exchange.

Our [website](#) provides the easiest way to do it. Just click one of the many Get Hazel buttons and everything should be setup for you. All you need to do is click on Connect Wallet in the top right corner on PancakeSwap and select MetaMask. A pop-up window will appear in the top right corner of your browser. Just click Next and Connect.

If everything went well, the swap window should look like this, indicating the swap from BNB to HZL.

In the off chance that HZL is not selected, just click on the down arrow next to the second coin (where HZL is shown in the image) and paste the Hazel Token Smart Contract address:

0x9f82AfF7F13bB2dfEd444539c7c76fC5030b1EF1

Now input your desired amount of Hazel Token to buy and click Approve HZL and Confirm when the MetaMask windows appears. After the approval transaction is executed, the swap button will become active.

Remember, the maximum wallet capacity is 9,000,000 (9 Million) HZL.

As Hazel Token has a charity component, a very small fee (in HZL) will be deducted from your purchase and sent to the charity wallet for TREES.org.

Click on swap and then confirm the transaction from the MetaMask pop-up window. After that, a window will appear with the confirmation message "Transaction Submitted". To be able to see your Hazel Token in MetaMask you must click Add HZL to MetaMask.

After the transaction is executed, you should be able to see HZL in your wallet.

Congrats! You are now part of the Hazel Community! Join us on our:
